Abstract of JP11079956

PROBLEM TO BE SOLVED: To obtain the subject composition good in the smoothness and flexibility of hair on rinsing and in the finger possibility of the hair after the rinsing by adding a polyoxyalkylene derivative, a cationic residue-having polymeric substance and a water-soluble inorganic salt to an anionic surfactant and/or an amphoteric surfactant. **SOLUTION:** This hair shampoo composition is obtained by adding 0.1-10 wt.% of a polyoxyalkylene derivative preferably a linear polysiloxane-polyoxyalkylene copolymer of the formula [(m), (n) are each 1-4; (a) is 1-1,000; (b) and (c) are each 0-1,000; (d) is 1-100] or the like), 0.01-5 wt. % of a cationic residue-having polymeric substance (e.g. dimethyldiallylammonium homopolymer chloride), and 0.01-5 wt. % of a water-soluble inorganic salt (e.g. sodium chloride) to a hair shampoo composition containing an anionic surfactant (e.g. sodium polyoxyethylene alkyl ether sulfate) and/or an amphoteric surfactant (e.g. lauric acid amidopropyl betaine) in an amount of 5-40 wt.%.
